Let MSDSonline do the hard work for you.

MSDSonline® offers a wide range of services – everything you need to build and maintain a compliant electronic MSDS management program. Our team of experts has been managing client MSDS libraries for more than 10 years. We offer timely project turnaround and competitive rates on all of our services. So if you're ready to make the jump from paper to electronic MSDS management, you've come to the right place.

MSDS Library Building Services

- **Document Scanning & Indexing** – Simply send us your paper MSDSs and we'll scan, index and post them to a secure eBinder on the Web.
- **eBinder Valet** – Send us an inventory list and we'll match that against our database of millions of manufacturer-original MSDSs. Once completed, your MSDSs will be posted to a secure eBinder on the Web, giving you around-the-clock electronic access.
- **Database Conversion** – If your data already exists in a legacy system, we can import and convert the information into our system, so you won't lose any of the work you've already completed.

On-Site Chemical Inventory Audit

MSDSonline will send an experienced expert to your location to create a site-specific chemical inventory. During the audit process, we'll capture each chemical product name, manufacturer, product code (if applicable) and where each product exists at your location, so you can get an accurate snapshot of your entire chemical footprint.

Outsourced MSDS Management

- **MSDS Update Services** – We'll work with you to make sure your MSDS library is always up-to-date and compliant. Send us periodic updates of your inventory and we'll make sure your online library is updated. You determine the schedule (monthly, quarterly or annually) and we'll do the rest for you.
- **MSDS Verification Services** – Want to verify that your library contains the most current MSDSs? Our team of experts will periodically review your online library to make sure you have the latest versions. We'll work with you to determine a review cycle that's right for you.

Special MSDS Indexing Projects

- **Special Indexing** – We'll index your database on any information contained within standard sections of an MSDS, including: Ingredients, HMIS/NFPA Rating, Health and Physical Hazards, Target Organs, PPE, DOT Hazard Class, WHMIS Classification, GHS Classification, Safety & Risk Phrases, Regulatory Categories, Physical Properties, etc.
- **Regulatory Cross Referencing for MSDSs** – We'll compare the chemicals in your inventory against various watch lists such as: California Prop 65 Regulated Chemicals, Department of Homeland Security Chemicals of Interest, Department of Transportation Hazards, EPA Regulated Chemicals, REACH Regulated Chemicals, Non-Hazardous Chemical Substitutions and more.
