

"The HQ Account gives my entire company an affordable way to meet Hazard Communication compliance."

HQ Centralize Hazard Communication Across Your Organization

Overview

It's estimated that 5 million facilities in North America alone handle chemical materials. In the United States, OSHA reports that more than 40 million American workers are exposed to hazardous chemicals each year.

To that end, OSHA adopted the Hazard Communication Standard (HCS) to help protect employees in industries where workplace hazards and chemical exposures are commonplace. Canada enacted a similar standard, WHMIS; and more recently, the global hazardous chemical classification system, GHS, designed to harmonize standards between most industrial nations, has come into play.

As an EH&S professional, you have a lot of responsibilities. Inventorying chemicals, obtaining and ensuring your employees have access to safety data sheets, training employees and keeping up-to-date with changing regulatory requirements are just a few of the tasks on your plate.

Do Away with the Paper Binders

Managing your regulatory programs using paper-based methods is cumbersome, costly and often leads to noncompliance. As a result, hazard communication is one of the most frequently cited violations annually, costing businesses millions in fines, penalties and litigation expenses.

Now there's an easy and affordable way to manage your chemicals and MSDSs electronically in order to save time, save money and improve compliance.

Streamline HCS Compliance

Our HQ Account is ideal for single- or multi-facility businesses that need a robust hazardous chemical management and compliance solution. As the name suggests, the HQ Account enables you to centralize compliance across your entire organization.

You get unlimited access to our industry-leading database of safety data sheets to ensure you have an MSDS for every chemical product on site. And an easy-to-use Web interface ensures your employees receive Right-to-Know access to your specific MSDSs, secondary container labels and other critical safety information.

Better Manage Chemical Hazards

On-demand chemical inventory tools help you to track, manage, properly label and report on the chemicals in your site-specific inventories — down to the storage location and container level. At the same time, chemical workflow and approval management tools give you control over when, where and what chemicals are allowed on site.

It's a comprehensive and compliant safety management solution, all in one easy-to-use and familiar Web environment. See back for a detailed list of features and a comparison of all our MSDS management accounts. To learn more, visit www.MSDSonline.com or call us toll-free at 1.888.362.2007 (U.S. & Canada Only). Outside the United States, call 1.312.881.2000.

Benefits

Millions of MSDSs at Your Fingertips

24/7 access to the industry's leading database of safety data sheets ensures your company's MSDS library is up-to-date and in compliance.

Simplify Compliance

Easy-to-use tools help you meet key requirements of hazard communication (OSHA / WHMIS / GHS) including hazard determination, Right-to-Know access, labeling, safe chemical handling, PPE, and more.

Improve Chemical Management

Robust chemical management tools give you greater container-level control over the location, status and risks associated with the chemical products your company uses.

Regulatory Compliant

Multiple back-up options means your system meets OSHA, WHMIS and other regulatory requirements for electronic MSDS/chemical management.

Quick ROI & Low Cost of Ownership

The HQ Account pays for itself by eliminating time-consuming manual administrative tasks; plus, there's no software to install or maintain and you get immediate access to new features and enhancements.
