

MSDSonline Mobile

With VelocityEHS' MSDSonline solutions, you can access safety data sheets and manage critical chemical inventory information whenever and wherever you need to, from any mobile device.

Intelligent Mobile Technology for In-the-Field Access

Chemical safety management occurs both in the office and in the field. The days of relying on hard-copy binders of material safety data sheets and inventory spreadsheets to access key chemical information are over. Today, technology plays a more significant role than ever in streamlining chemical management processes. The ability to access inventory and safety information quickly – and from any location—is essential to creating safer, more productive workplaces.

Adoption of GHS by OSHA, Health Canada and other agencies around the world has changed the landscape of workplace labeling and safety data sheet management, putting a larger spotlight on critical safety requirements for employers and compliance enforcement officers alike. As a result, employers need to be equipped with smarter, mobile-ready tools for managing chemical inventory information in order to stay ahead of compliance.

VelocityEHS has responded. Our award-winning cloud-based MSDSonline products are mobile optimized to help you and your workforce access critical chemical inventory and safety information anytime, anywhere and on any device—from a desktop to a laptop, tablet or smartphone. And our mobile app makes it even easier for you and your employees to have safety information at your fingertips, whether online or offline.

The world may be getting smaller, but we've just made the positive impact of mobile chemical management on your workplace that much bigger.

Features

- Manage chemical containers via your mobile device from anywhere your chemicals are stored
- Search, access and deploy safety data sheets
- View critical safety information anytime, anywhere
- Manage and approve chemicals at their point of origin
- Increase access to hazardous chemical information in areas where internet connectivity is limited
- Proactively share up-to-date, potentially lifesaving hazardous chemical safety information with first responders through our mobile-ready Plan1 First Responder Share Service

Enhanced Access via Our Mobile App [\(see back for full details\)](#)

- Gain anytime, anywhere access to your chemical inventory, plus online and offline access to SDSs
- Provide immediate access to critical chemical safety information to employees throughout your organization
- Quickly scan container barcodes, QR codes and UPC codes to retrieve and manage container and other chemical inventory information from the field
- Save time managing your inventory with options to access all containers and edit their details—individually or in batches—from a single convenient location

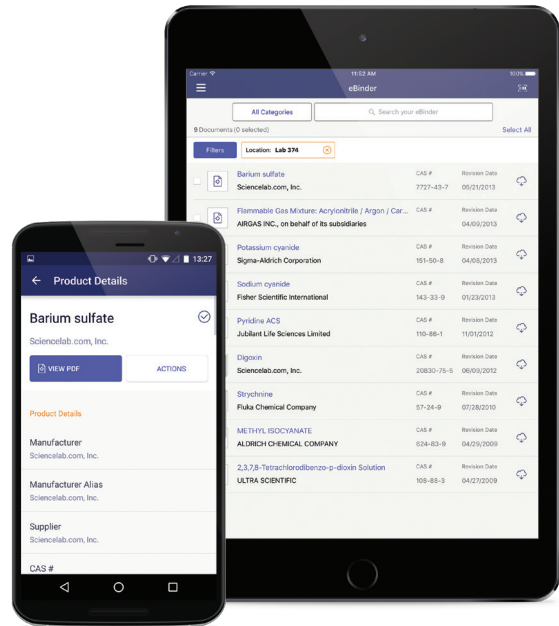

SDS / Chemical Management Mobile App

Our SDS / Chemical Management app syncs directly with your MSDSonline HQ or HQ RegXR Account, allowing you and your employees to view critical chemical information and save it to your mobile device for offline use, and to manage your chemical inventory across locations. With the SDS / Chemical Management app, effective chemical management has never been more convenient.

Features

- Access safety data sheets, product details and container information both online and offline
- Scan barcodes, QR codes and UPC codes, and access previous scans both online and offline
- View the products and containers in use at your company, and the locations to which they are assigned
- View all containers and perform individual or batch edits to container information from a single location within the app, saving you even more time and providing increased visibility and control over your inventory
- Benefit from account syncing which recognizes existing user roles and permissions, and also ensures up-to-date SDSs, product summaries and container details from your MSDSonline Account also appear in your app
- Provide employees throughout your organization with immediate access to critical chemical safety information
- Share links to your chemical safety information with employees, visitors and first responders – even if they don't have the app
- Use on an array of popular devices, including iPad®, iPhone® (iOS9 and later), and tablets and smartphones for Android™ (4.4 and later)

The SDS / Chemical Management app functions both with and without internet access, making it perfect for:

- Agricultural workers who are literally out in the field
- Maintenance workers in departments accessing basements, storage areas and other locations where WiFi is not accessible
- Workers traveling to remote construction worksites

Simplify hazardous chemical management and compliance from the field with mobile technology from MSDSonline – a VelocityEHS solution.
